SENSORS

Table of Contents

Air Velocity

Application:

This sensor is ideal for use in animal facilities. It allows you to read the number of 'room air changes per hour' directly, or to read air changes in 'feet per minute'. Other applications include supply and exhaust fan tracking, industrial hygiene and clean room systems, and manufacturing or process control.

Specifications:

Measuring values

Working Range *0...10m/s (0...2000ft/min)

*0...15m/s (0...3000ft/min)

*0... 20m/s (0...4000ft/min)

*Range selectable by jumper

Output 0 - 10 V 4 - 20 mA RL< 450 Ω

Accuracy at 20°C (68°F), 45 % RH and 1013hPa

0...10m/s (0...2000ft/min) $\pm (0.2$ m/s / 39.4ft/min + 3 % of m. v.)

0...15m/s (0...3000ft/min) $\pm (0.2$ m/s / 39.4ft/min + 3 % of m. v.)

0...20m/s (0...4000ft/min) \pm (0.2m/s / 39.4ft/min+ 3 % of m. v.)

Power supply 24V DC ± 20 %

Current consumption

DC supply max. 90 mA

Angular dependence < 3 % of measurement at $|\Delta\alpha|$ < 10°

Cable gland M16x1.5 cable Ø 4.5 - 10 mm (0.18 - 0.39")

Electrical connection screw terminals max. 1.5 mm2 (AWG 16)

Temperature range working temperature probe -25...50°C (-13...122°F) working temperature electronic -10...50°C (14...122°F) storage temperature -30...60°C (-22...140°F)

Ammonia Gas in Air Sensor

Application:

As more and more facilities install ventilated cage rack systems for animal research, new monitoring concerns often arise. One of the issues is room ammonia levels. The common goal of facilities using ventilated cage racks is to cut down on the number of bedding changes. By circulating cool, clean air into the individual cages, technicians feel they can significantly extend the life of the bedding, sometimes up to 2 to 3 weeks. By extending bedding life, institutions can reduce labor and materials costs.

Most of the current rack systems on the market circulate air from within the room through the racks and cages. The exhaust air is then blown from the rack into the room. The facilities HVAC system will then circulate clean air into the room. When the bedding life is extended, you can expect an increase in ammonia levels. By placing an ammonia sensor in the room or duct, you can make a better determination of when the cages need to be changed.

Dimensions: 8.8" x 4.0" x 4.2"

Specifications:

Sensor Type: Electrochemical

Range: 0-50 PPM Resolution: 0.5 PPM

Response time: 90%, 30 sec.

Sensor Life: 1 year

Operating temperature: 14° to $+113^{\circ}$ F. $(-10^{\circ}$ to $+45^{\circ}$ C)

Relative Humidity: 20 - 90%

Weight: 2.1 lb.

Calibration frequency: 90 days recommended

Electrical data: Loop type: 3 wire

Loop resistance: 800 Ohms at 28 VDC

Input voltage VDC: 14-30 Input current: 40mA Input power (max): 14 W

Signal output - Normal: 4 - 20mA DC linear

Signal output - Trouble: 0mA

Operating pressure: +10% (variation from ambient)

Housing: Explosion proof (NEMA 7)

Warranty: 1 year

Ammonia gas in air sensor	AMMONIA-1

Carbon Dioxide Monitor

Application:

Carbon Dioxide transmitters are designed to measure CO_2 in harsh environments such as incubators and greenhouses. The materials are corrosion resistant and the housing is dust and water resistant to NEMA 4/IP65 standards. This sensor has outstanding stability over both time and temperature. Longer time between calibration intervals saves both time and money.

The sensor has a measurement range of 0 - 20% CO₂. The transmitter probes are interchangeable and they facilitate easy field maintenance. Probes can be returned for recalibration.

Note: A battery back-up is recommended for every four sensors.

Specifications:

Measurement range: 0 - 20%

Accuracy: at 77° F (+25° C) $< \pm [0.3\% \text{ CO2} + 2\% \text{ of reading}]$

Stability: <±5 %FS/2 years

Temperature dependence,typical: -0.3 % of reading / °C Pressure dependence (typ.):+0.15% of readings/hPa

Response time (63%): 20 seconds Analog output signals: 4 to 20 mA

Power supply: 24 VDC Warm-up time: < 15 minutes

Operating temperature range: -4° to +140°F (-20° to +60° C) Storage temperature range: -22° to +158°F (-30° to +70° C) Operating humidity range: 0 to 100% RH non-condensing

Flow Transmitter

Application:

Measure the flow of a liquid in pipes to an animal room, or any location.

Flow transmitters require pipe fittings which are not supplied. See Flow Transmitter fittings.

Specifications:

Housing Material: Polypro

Bearing Material: at 95% Alumina Ceramic

Pipe Size: 1/2" to 4" Sensor O.D.: 1.05" Sensor Length: 3.50" Output: 4-20mA Paddlewheel Sensor:

Range: ±1.0 FPS to 12 FPS Std. to 20 FPS opt.

Linearity: ±1% over full range Repeatibility: ±1/2% over full range Accuracy: ±1% over full range Pressure Rating: 200 psig at 25° C

Temperature Rating: 212° F at 50 PSIG (requires metal fitting)

180° F at 25PSIG (CPVC fitting)

Max % Solids: 1% of fluid volume

Standard: Use with Centron	FLOW-1

Dimensions: 5.75"H x 6.375" Diam.

Temperature/Humidity Transmitter

Application:

This temperature/humidity transmitter is used in reach-in stability chambers and incubators. Its small sensor head responds quickly to surrounding temperature changes.

Specifications: Dimensions: 129mm W x 72mm H x 45mm D, excluding probes

Relative Humidity

Measurement range: 0 to 100%

Accuracy: ±1.0 % RH

Response time: 10 s (63 % change)

Temperature

Measurement range: -40° to $+140^{\circ}$ F (-40° to $+85^{\circ}$ C)

Accuracy: ±0.1°C

Analog outputs: 4 to 20mA

Operating temperature range of transmitter:

-40° to +140°F (-40° to +60°C)

Sensor requires 24VDC Power (Current Draw <100 mA)

Temperature/Humidity Transmitter for Stability

Application:

This is a 0 - 100% high performance temperature/ humidity transmitter that is ideal for walk-in stability chambers. It is perfect for critical areas and applications where humidity and temperatures tend to fluctuate. The unit is fully temperature compensated and provides unsurpassed accuracy over the entire temperature range of -40° to +140°F (-40° to +60°C). The unit can operate in condensing environments, is resistant to harsh chemicals and contaminants, and has excellent long term stability. Maintenance can be performed onsite without disturbing transmitter operation. This one point calibration feature saves down time, reduces service costs, and ensures high accuracy operation.

Specifications: Dimensions: 129mm W x 72mm H x 45mm D, excluding probes

Relative Humidity

Measurement range: 0 to 100%

Accuracy: ±1.0 %rh

Response time: 10 s (63 % change)

Temperature

Measurement range: -40° to $+140^{\circ}$ F (-40° to $+85^{\circ}$ C)

Accuracy: ±0.1 K

Analog outputs: 4 to 20mA

Operating temperature range of transmitter:

-40° to +140°F (-40° to +60°C)

Sensor requires 24VDC Power (Current Draw <100 mA).

DC-Input Single Channel Signal Isolator

Application:

Use the single channel isolator to measure CO_2 and humidity levels in incubators with chart recorder outputs. Useful in eliminating ground loops, converting signal levels, and providing signal drive, the sensor completely isolates the input and output signals from each other and from ground. Input and output ranging is field selectable. The main application is converting 0 to 1 volt chart recorder outputs to a 0 to 5 volt signal that the Centron can use.

Incubators commonly have 0 to 1 volt signals for CO₂ and humidity.

Dimensions: 7.25" W x 8.25" H x 3.5" D

Specifications:

Number of Inputs: 1.

Applicable Input types, Current: 0-(1,5,10,20,50,100) mA.

Applicable Input types, Voltage: (1, 5, 10) VDC. **Power Supply:** 12 or 24 VDC/AC 40 to 400 Hz.

Isolation: 1500 VAC.

Temperature Range (operating): 32 to 131°F (0 to 50°C).

Linearity: 0.1%.

Drift: ±0.02% per °C typical, ±0.05% maximum.

Input Impedence - Current: 10 ohms. Input Impedence - Voltage: 1 Megohm.

Relative Humidity Sensor (Wall mounted)

Application:

For use in energy management control systems, clean rooms and computer rooms, industrial process control, environmental chambers and testing, and storage areas for humidity sensitive products. The wall mounted unit can be used in rooms subject to washdown.

Specifications:

- Two-wire linear 4-20 mA.
- 4 wire linear 0-1 mA, 0-1, 0-5 & 0-10 VDC
- · Humidity probe recovers from condensation, resists chemical vapors.
- · Calibrated to NIST traceable standards

Standard Accuracy: ±2% from 5-95% RH.
Low Cost Accuracy: ±3% from 25-85% RH.

High Temperature Humidity Sensor

Application:

Humidity sensor for high temperature applications such as stability chambers and incubators *(non condensing). Sensor is wall mounted for remote probe installation.

Specifications:

Dimensions:

Base Unit:

Analog Output: 4-20mA Supply Voltage: 24VDC

Operating Temperature Range: -40°C to 60°C

Remote Probe:

Operating Temperature Range: -40°C to 71°C

Measurement Range: 35-90%RH *(Non Condensing)
**(measurement range to change in the near future)

Accuracy: ±2%
Cable Length: 20'
Probe Diameter: 0.97"
Probe Length: 4.5"

Probe Tubing Material: 304 Stainless Steel

Туре	Order #
Humidity	HUM2-HT-R

Space (Wall) Mount Relative Humidity Transmitter

Application:

Monitors ambient humidity for use in laboratories, clean rooms and server rooms. Specially designed enclosure provides enhanced airflow, thereby increasing sensor response time and virtually eliminating the potential of "self-heating" by transmitter electronics that can lead to decreased accuracy measurements.

Not recommended for use in stability or environmental chambers, outdoor applications, or other extreme environments. For use in these applications, refer to Part # HUM-VA1-REM.

Specifications:

Operating Range: 0% to 99% RH (non-condensing)

Sensing Element: Capacitive polymer sensor

Accuracy at 71.6° F (22° C):

±2% version: ±2% 10 to 90% RH
±5% 0 to 10 % & 90-99 % RH

Long Term Stability: Less than 1% drift per year, typical

Temperature Effect:

Delta %RH=(0.0014 x %RH + 0.1325) x T°C - (0.0317 x %RH + 3.0876)

Signal Outputs: 4 to 20mA, 0 to 5V or 0 to 10V (user selectable).

Supply Voltage: 24 Volts DC.

Case: ABS Flame Retardant Mounts on single gang box.

Rear wire entry.

Manual Lighting Override Timer

Application:

For those facilities still controlling room lighting with a mechanical timer, the override timer can be used with the Centron monitor to insure that when someone enters an area and overrides the lighting control, that the lighting will return to its proper state automatically, even if you forget to reset.

The timer has a programmable digital display from 0 to 100 minutes. If you need to enter the room during a time when the lights are scheduled to be off, just enter the number of minutes that the override is to be in effect. You reset the timer when you leave. If you forget to reset the timer, the lights shut off when the time you originally programmed runs out.

Specifications:

- · Microprocessor-based interval time switch.
- · Switching 15 amp relay.
- · Audible timeout alarm.
- · Previous setting kept in memory to facilitate repeat operations.
- · Large, easy to read LED display.
- · Bit generator to 'dial-in' desired times.
- · Manual Start/Stop and Reset buttons.
- Minimum 1 minute power hold-up.
- · Several maximum time interval ranges available.

Interval Countdown Timer	LIGHT TIMER

Dimensions: 2.75" x 2.75"

Oxygen Sensor

Application:

This sensor uses Electrochemical gas sensor to detect the level of oxygen in room air. The sensor is used in refrigeration rooms, oxygen storage rooms, 'freezer farms', bone marrow labs, IVF labs, etc., anywhere low Oxygen levels might occur. It is also used where you have freezers with CO2 backup tanks in a confined space. The sensor provides an analog output of 4-20 mA DC linear output.

Not to be used in a life safety application.

Dimensions: 6"h x 3.5"w

Specifications:

Factory Set Range: O2, 0 to 25% Accuracy: ± 2.5% of reading Repeatability: ± 1% of reading Input Power: 24 Volts DC

Enclosure Materials: Polycarbonate / ABS blend

Fire Retardant

Temperature: -20° C to 40° C

Humidity: Continuous 15 to 90% RH, non-condensing

Intermittent 0 to 99% RH, non-condensing

Pressure: Atmospheric ± 10%

Response Time: Less than 60 seconds for 90% of step change

Sensor Type: Electrochemical Sensor Life: Typical 2 to 3 years Output Signal: Analog, 4-20 mA

Mounting: Screw mounts to a standard 2" x 4" electrical junction box.

Single Phase Power Line Monitor

Application:

This transducer is used to monitor the 115V or 220 VAC single phase voltage being supplied to critical equipment. It comes with a standard wall plug for easy installation. It is designed to be plugged into the same duplex outlet used by the equipment. NOTE: This sensor is not designed to alarm if power is removed because the equipment is unplugged or turned off by its ON/OFF switch.

Dimensions: 5.375" H x 5.375" W x 2.125" D

Specifications:

Input: 115 or 220 VAC single phase - field selectable.

Output: 0-5 VDC proportional to input voltage.

Туре	Order #
Standard: Use with Centron	PLM-115

3 Phase 220/440 Power Line Monitor

Application:

This solid state unit continuously monitors three phase lines for phase loss, low voltage, phase reversal, and phase unbalance. The output relay is energized under normal conditions, and de-energized while at fault. The unit automatically resets when the fault is corrected. This monitor can be used on WYE or DELTA systems since no neutral is required.

Dimensions: 3.88" W x 6" H x 2" D

Specifications:

Input: 60 cycle, 160VAC to 240VAC adjustable.

Output: Single pole double throw relay.

Input: 60 cycle, 380ACV to 480VAC adjustable.

Output: Single pole double throw relay.

Large Diaphragm Pressure Switch

Application:

The PSSW-DUCT is an economical and reliable solution for monitoring airflow into animal rooms. Installed in the supply duct of each animal room, this SWITCH sensor has a field adjustable set point. The PSSW-DUCT, with an operating range measured in inches of water column, is available in five different ranges.

Dimensions: 7.75" diam. x 6.5" deep

Specifications:

- Diaphragm, 7.75", with visual set point adjustment. 1% repetitive accuracy.
- Temperature limits: -30° F. (34°C.) for dry air or gas to 110° F., (43° C.)
- Maximum pressure surge: 25 psig.
- Rated pressure: 10 psig.
- Pressure connections: .125" NPT.
- Electrical rating: 15 amps, 120-480 volts, 60 Hz. AC.
 Resistive 1/8 HP @ 125 volts, 1/4 HP @ 250 volts, 60 Hz. AC.
- Wiring connections: 3 screw type, common, normally open and normally closed.
- Set point adjustment: Screw type with enclosed scale.
- Housing: 16 ga. steel, zinc plated, dichromate dipped for 200 hour salt spray test.
- Diaphragm: Silicone rubber with aluminum support plate.
- Calibration spring: Stainless steel.
- Weight: 4 lbs. 14 oz.
- Installation: Diaphragm vertical.

Pressure Switch

Application:

Use the PSSW-2 to monitor CO₂ pressure to an incubator to determine when to change the tank. It is also used for general low pressure monitoring of compatible fluids.

NOTE: When a PSSW-2 Sensor is ordered, all the parts listed above, with the exception of the CO2 unit and the unit being monitored, are supplied.

Specifications:

The PSSW-2 provides a switch closure output dependent upon a field adjustable set point. The range is 2 to 22 PSIG. The switch will activate when the pressure is greater than the set point, and deactivate when the pressure is below the set point. The switch is a single pole double throw configuration.

Switch: SPDT

Electrical connection: 1/4" quick connect, male.

Rating: 20 amp to 277 VAC @ 160° F for 100,000 cycles.

Range: 2 to 22 PSIG

Max. Operating Pressure: 75 PSIG

Operating Temperature: 0°C to 87°C., (32°F to 190°F.)

Pressure media: Non corrosive fluid compatible with 300 series stainless steel

and BUNA-N.

Pressure connection: 1/4" hose barb - male

Differential Pressure Transmitter

Application:

The differential PSTR-DUCT is used to measure the pressure differential between two points, such as between a room and the hallway. It reads out in positive INCHES OF WATER. The PSTR-DUCT is available in several ranges, so it is necessary to know the pressure in inches of water column in order to specify the proper model. If you need to monitor negative pressure, or monitor for pressure reversals, use model # PSTR-DUCT-NP Negative to Positive Differential Pressure Transmitter.

Specifications:

- Maximum Pressure: 10 PSI (0.7kg/cm2).
- · Media Compatibility: Air or non-conducting gases.
- Power Supply: 9 30 VDC
- Output Signal: 4 to 20 mA DC, two wire loop-powered.
- Current consumption: 4 mA DC (unidirectional pressure ranges)

12 mA DC (bidirectional pressure ranges)

- Materials: Stainless steel diaphragm and insulated stainless steel electrode
- · Weight: 3 ounces.
- Span & Zero Adjustments: Factory set to specified range. Externally accessible for fine adjustment. Non-interactive.
- Pressure Connection: ½" O.D. pressure fittings with 1/4" push-on tubing.
- Performance at 70° F:
- Zero Output: 4 mA DC (unidirectional); 12 mA DC (bidirectional)
- Accuracy (incl. linearity, hysteresis, repeatability): ± 1% of full span output.
- Operating Temperature: 0 °F to +150 °F (-18 °C to +65 °C)

Negative to Positive Differential Pressure Transmitter

Application:

This high accuracy differential PSTR-DUCT-NP is used to measure the pressure differential between two points, such as between a room and the hallway. It can read both positive and negative pressure so that you can use it to detect reversals in pressure. It reads out in INCHES OF WATER. The PSTR-DUCT-NP combines very low ranges with exceptional stability, reliability, and ±0.5% accuracy for the most demanding applications. This unit is designed to resist shock and vibration, practically eliminating drift. The unit is certified to NIST standards. It is available in several ranges, so it is necessary to know the pressure in inches of water column in order to specify the proper model.

Dimensions: 4.2" H x 4.6" W x 1.825" D

Specifications:

- Maximum Pressure: 10 PSIG (0.7kg/cm2).
- Media Compatibility: Air & non-conductive, non-corrosive gases.
- Power Supply: 13 36 VDC unregulated.
- Output Signal: 4 to 20 mA DC, two wire.
- Loop Resistance: 0-1045 ohms, Vmin. = 13V + [(.022A)(RL)].
- Current consumption: 3.6 mA DC (min.).
- Materials: Ultra thin glass clad silicon diaphragm. Stainless steel housing (NEMA-2).
- Weight: 14 ounces.
- Span & Zero Adjustments: Factory set to specified range. Externally accessible for fine adjustment. Non-interactive.
- Pressure Connection: Barbed, stainless steel for 1/4" I.D. tubing.
- Performance at 70° F:

Zero Output: 4 mA DC; Full Span Output: 20 mA DC

Accuracy (incl. linearity, hysteresis, repeatability): ± 0.5% of full span output.

Stability: ± 1% of full span/year. Warm-up Time: 15 seconds.

- Operating Temperature: (10-95% Rh, non-condensing)

Rotation Sensor

Application:

The Rotation sensor is used to detect the motion of platelet rotators.

An electrical pulse is generated every time the magnet that is mounted on the rotating equipment passes the Rotation sensor. If this pulsing electrical signal stops, the monitor goes into alarm.

Specifications:

- Supply Voltage: 5 VDC @ 10mA
- Output Voltage: 5 VDC in alarm; 0 VDC in motion
- Min. Frequency: 1 pulse in 20 seconds
- Max. Displacement: .15 inches
- Programming: Program as switch input; alarm when high
- Alarm delay = 0 minutes
- The pluggable rotation sensor comes with a 3.5mm sensor plug on 25 feet of shielded wire.

Туре	Order#
Standard: Use with Centron	ROTATE-1

Shaker Sensor

Application:

The Shaker sensor is used to detect motion on shaker tables. The Shaker sensor translates a motion into an electrical signal that can be monitored by the Centron.
As long as the sensor

As long as the sensor continues to move, it generates a signal that keeps the monitor out of the alarm state.

Specifications:

 Supply Voltage: 5 VDC @ 10 mA
 Output Voltage: 5 VDC in alarm, 0 VDC in motion

T... //-

Min Frequency: .5 HzMin Displacement: .25 In

- Programming: Program as switch input; alarm when high.

Surface Water Detector

Application:

Detect water in computer rooms, document storage areas, warehouses, bone marrow rooms, any place where water can cause damage and loss.
Detect leaks, monitor sump pumps, cage wash rooms, and sprinkler systems. The sensor is designed to detect water, but it will not alarm due to condensation or high humidity.

Specifications:

Each sensor can be connected to up to six (6) probes and can cover a distance of up to 100 feet from the wall mounted sensor.

Power requirement: 8-14 VDC.

Current draw resting state: 3.5 mA at 12 VDC. Current draw alarm condition: 43 mA at 12 VDC.

Sensitivity: Will not alarm due to hight humidity or condensation.

Each probe has 2 contacts. A film of water, forming a bridge between them,

is needed for an alarm condition.

Operating temperature: Control unit - 32° to 140°F., (0° to 60° C.)

Probe - 32° to 140° F., (0° to 60° C.)

Relay rating: 1 Amp at 24 VAC, resistive.

Relay specifications: 1 Amp at 30 VDC, resistive.

Each sensor comes with one probe.

Light Sensor

Application:

The PHOTO-P1 is designed for use in applications where it is only necessary to know if the lights are on or off. Its principal application is in animal rooms and plant growth chambers.

Specifications:

CDS photo cell mounted on a stainless steel plate which can be mounted in a single gang box. It is epoxy sealed and water resistant.

Туре	Order #
CDS	РНОТО-Р1

Dimensions: 2.75" W x 4.5" H

Ambient Temperature Sensor

Application

The TPT-2-Ambient sensor is designed specifically to monitor ambient room air temperature. The unit is a stainless steel plate with the sensor protruding through the face of the plate. The junction of the plate and the sensor is gasketed for water resistance. This sensor is useful in HVAC applications to monitor and/or control room temperature; i.e. computer rooms, animal rooms, file storage rooms, packaging rooms, with bench testing, freezer rooms, etc.

Monitoring the ambient temperature in a room full of freezers gives you warning if the room air handler goes down, preventing compressor overload.

Dimensions: 2.75" W x 4.5" H

Specifications:

Temperature sensor provides great sensitivity and fast response time. Connections are sealed against moisture. Can be installed onto a single gang box.

Cryogenic Thermistor Probe

Application:

This device constitutes an excellent alternative to our thermocouple amplifier for the monitoring levels of liquid nitrogen freezers and Dewars. The Cryo-6 probe is a good level sensor and is useful for determining when liquid nitrogen tanks need to be refilled. When the liquid nitrogen goes below the probe level, the temperature above increases and sets off an alarm. It's time to refill the tank. Disconnectable probes are available for situations where equipment is routinely moved or switched around. A programming change is all that is required when probes are moved to new equipment.

Dimensions: Probe: 2.75" L x .25 diam.

Specifications:

- This probe is similar to our standard thermistor probe in physical structure, but it is designed with a -125 to -200° C. temperature range. These probes are stable and are accurate to within 1° C. once calibrated at the liquid nitrogen temperature of -196° C. With deviation from the calibrated temperature their temperature accuracy decreases. Approximate errors are ±2° at ten degrees from the calibrated point, and ±6° at 60° from the calibrated point.
- Pull-up resistor value at remote panel is 3.01K for standard, non-disconnectable probes.
- The Cryo-6 probe can be used with the Centron.
- The disconnectable probe has 15' of wire with a 1/4" plug, and a wall plate with jack.
- The 1/4" disconnectable probe requires a 100K pullup resistor between sense and +5 volts at the remote panel.

Thermocouple Amplifier

Application:

Thermocouples can be used over a wide range of temperatures. When the temperature to be measured falls outside the range of a standard TPT thermistor probe $(< -80^{\circ} C. \text{ or } >$ 105°C.), (< -112° F. or $> 157^{\circ}$ F.) the thermocouple should be used. It is most commonly used when monitoring liquid nitrogen freezers.

15' or 25' of Type K thermocouple wire

Wire from T/A to monitoring unit

Bare Bulb Thermocouple Probe

Specifications:

The thermocouple amplifier will mount in a single gang electrical box or surface mount in the provided enclosure. It comes with industry standard quick disconnect with 15 or 25 feet of wire. The thermocouple is a temperature measurement device that produces a very small voltage in proportion to the temperature differential across the sensor. The thermocouple amplifier converts this small voltage into a signal that can be used by the Rees Monitors. The accuracy above -70° C. is $\pm 1.5^{\circ}$; from -270° C to -70° C the accuracy is $\pm 3_{\circ}$.

Thermocouple ampifiers come with Type K thermocouple wire w/plug, in either 15' or 25' lengths.

Use the standard thermocouple amplifier with the Centron.

Order # (w/15' wire)	Order # (w/25' wire)	Temperature Ranges
TA - 16-15	TA - 16-25	-270 to + 50° C
TA - 17-15	TA - 17-25	0 to 250° C 32 to 482° F.
TA - 18-15	TA - 18-25	200 to 450° C 392 to 842° F.
TA - 19-15	TA - 19-25	400 to 650° C 752 to 1202° F.
TA - 20-15	TA - 20-25	600 to 850° C 1112 to 1562° F.
TA - 21-15	TA - 21-25	800 to 1050° C 1472 to 2102° F.
TA - 22-15	TA - 22-25	1000 to 1250° C 1832 to 2282° F.

Either the Amplifier or the Thermocouple Wire are available as replacement parts. Consult the factory.

Thermocouple - Freezers and Cryo Tanks

Application:

Thermocouples can be used over a wide range of temperatures. When the temperature to be measured falls outside the range of a standard TPT thermistor probe (< -80° C. or > 105° C.), (< -112° F. or > 157° F.) the thermocouple should be used. It is most commonly used when monitoring liquid nitrogen freezers. This probe is made for freezers that have skinny probe ports where only a thermocouple will reach.

Dimensions: 3.125" x 4.75", includes enclosure.

Specifications:

Range: -270°C to +50 °C Output: 4 to 20 mA Sensor: Type K

Supply Voltage: 8-30 VDC

Tolerance: ± (0.04% FS + 0.04% rdg) or 0.5°F whichever is greater

Sensor dimensions: 0.06" x 0.10"

Thermocouple ampifiers come with Type K thermocouple wire w/plug, in either

15' or 25' lengths.

Use the standard thermocouple amplifier with the Centron Presidio.

Either the Amplifier or the Thermocouple Wire are available as replacement parts. Consult the factory.

Combustible Gas Sensor

Application:

Monitors ambient air for concentrations of combustible gas in the range of 0-100% of the lower explosive limit.

Features:

- □ CSA and UL Approved: Class I, Division 1, Groups B, C, & D
- Plug-in field-replaceable transmitter and sensor
- Integral sensor fault diagnostics
- Long sensor life expectancy
- □ High resistance to poisons such as sulfides, chlorides, silicon-based contaminants etc.
- Low power consumption (less than 3.5 watts versus 8+ watts on competitive brands)

Specifications:

Sensor Type: Matched-pair catalytic bead

Measurement Range: 0-100% LEL (lower explosive limit)

Combustible Gas

Accuracy/Repeatability: ±3% 0-50% LEL

±5% 50-100% LEL

Response/Clearing Time: T50 <10 seconds

T90 <30 seconds

Zero Drift: <5% per year

Operating Temp. Range: -40°F to +167°F; -40°C to +75°C Operating Hum. Range: 0-99% RH non-condensing

Outputs: Linear 4-20 mA DC Input Voltage: 11.5-28 VDC

Power Consumption: 2.1 watts @ 24 VDC

Electrical Classification: Explosion proof Class I, Division 1,

Groups B, C, D

Safety Approvals: CSA and UL Approved

Standard: Use with Centron	CG-Sensor

Particle Counter

Particle Counter Sensor

Application:

Detects microscopic particles in controlled environments and critical processes.

Dimensions: 6" x 4" x 11.25"

Specifications:

- 0.5µm and 5.0µm channels
- 1.0 CFM sample flow rate
- 2 4-20mA proportional current outputs

Power

24 VDC @ 0.85A

Operating Temperature

0-37°C
