NOTIFICATION

Are you ready for the COVID Vaccine and Medications?

Monitoring the temperature of vaccines and medications is an essential task that is regulated by several government health organizations. The COVID -19 vaccine is a crucial remedy that will be developed soon. Initial reports indicate that quantities will be very limited. Our anticipation is it will be highly regulated and will be worth sizable capital. Certain vaccines will be stored at a much cooler temperature to ensure product safety and maximum potency.

- * The Rees Scientific system can monitor the temperature of any cold storage (refrigerators, freezers, ultra-low freezers) from +100 to -196 °C
- * Continuous, real time monitoring
- * Receive alarm notification via interactive phone, texts and e-mail
- * Has graphical and export capabilities
- * Exceeds data logger capabilities
- * Local audio and visual (LED) alarm available
- * Monitoring rate exceeds requirements of CDC

According to the CDC, you must have a process of *notification, documentation, communication and correction* for temperature monitoring.
