

Compliance. Security. Peace of mind.

Consider the cost of losing a colony of mice, a freezer of reagents, or weeks or months worth of data because the research has been compromised. In many cases, the cost of that loss will far outweigh the cost of placing an independent real-time monitoring system in your facility.

The **Centron Environmental Monitoring System** puts control of the facility into the hands of the investigators, the director, and the staff managing the facility. We meet a wide array of stringent regulatory agency requirements for environmental monitoring and validation including FDA 21 CFR 11, GxP, AABB, AAALAC, CAP, JCAHO and USDA.

In addition to keeping your products safe 24/7/365, the Centron provides up-to-date information on your entire lab. Whether a system-wide report or specific unit interrogation, every Centron report gives you detailed, easy to understand, accurate accounts of all transactions within your monitoring system and, most importantly, the confidence to know that you, your animals and your research are protected.
